

ABSTRACT

A neon lighting system for an illuminated vending machine or the like includes a neon tube having projecting conducting leads from each of its ends; conductive end caps sealingly affixed to said tube ends in contact with said leads and forming plug ends for the tube; power supply conductor wires have boot ends containing receptacles connected to said wires; and are adapted to snap on to and off from the tube plug end caps for quick placement and replacement of the neon tube. The boot ends are preferably formed with holding means for quick attachment and removal from brackets provided on the machine door structure.
